Input: arrays x & h

N → length of x
M → len(h)

y(output array) = len(N+M-1)
for all y[n] = 0

for n (0, N+M-2)
    for k (0, N-1)
        j ← n-k

        if 0 ≤ j < M.
            y[n] = y[n] + x[k] * h[j]

return y
